GOOD ROADS

FAME FROM ITS GOOD ROADS

Improved Streets, Smooth and Dustless Highways Around Philadelphia Advertised City.

Good streets and smooth, dustless country roads, have been a means of advertising and giving added importance to Philadelphia, not only throughout the United States and Canada, but abroad, according to William H. Connell, chief of the bureau of highways, Philadelphia Inquirer states.

Highway experts from scores of American and European cities, as well as engineers representing practically every state in this country, have studied the progress made by Philadelphia in dealing with one of the greatest of municipal problems, that of road construction and maintenance, and

Improved Road Near Philadelphia.

have requested information regarding the specifications used, the processes followed and other data pertaining to the work as carried on in this city, Chief Connell said.

Within the limits of the city, motorists, most critical of road users, can travel for more than 150 miles by diverse routes, without experiencing the slightest difficulty because of poor roads or dusty ones, the head of the highway bureau asserted. Visiting tourists, impressed by this fact, have heralded the reputation of Philadelphia as the city of good roads throughout the country, he said. The improvement, in many instances, has been made at comparatively little expense by means of surface treatments, varied to meet the demands of the occasion, he pointed out.

GROWTH OF IMPROVED ROADS

Inventions, Discoveries and Public Improvements Come When There Is Strong Demand.

The history of good roads affords a striking example of the fact that inventions, discoveries and public improvements take place only when there is an insistent demand for them. In early times, when each family lived largely to itself, there was little commerce in the articles produced on the farm and consequently little need for transportation. As large cities developed the demand for roads on which products might be easily transported grew.

Two of the most recent causes for the improvement of roads have been pleasure vehicles. Twenty-five years ago the bicycle began to come into common use and the cyclists made a vigorous demand for roads on which they might ride. Unfortunately, however, paths for bicycles were constructed in many places in lieu of improved roads. The invention of the automobile, however, has meant a real step toward better roads.

GET GOOD HIGHWAY SYSTEM

Not Difficult Problem If County or Township Is Willing to Use Common Sense.

How to get a good road system is not a difficult problem, if a county or township is willing to be guided by common sense. The first step is to employ a competent highway engineer. He will make a study of traffic conditions, ascertain where the main market lines with a type of surfacing material that will be less expensive than that required on the main market lines, and yet will at the same time meet all traffic requirements on the feeder lines. The main lines, if built of concrete, will be permanent and cost less to maintain.

How to Place Culvert. Where a culvert is placed in a road on a hillside to take care of the drainage collected in an uphill ditch, it should be placed across the road pointing in the direction of the flow of the steepest grade.

Changing Milk for Calf. The time to change the calf from whole milk to skim milk depends upon the development of the calf. If it is healthy it may be changed to skim milk at the end of the second week, but the third week would be better.

FARM ANIMALS

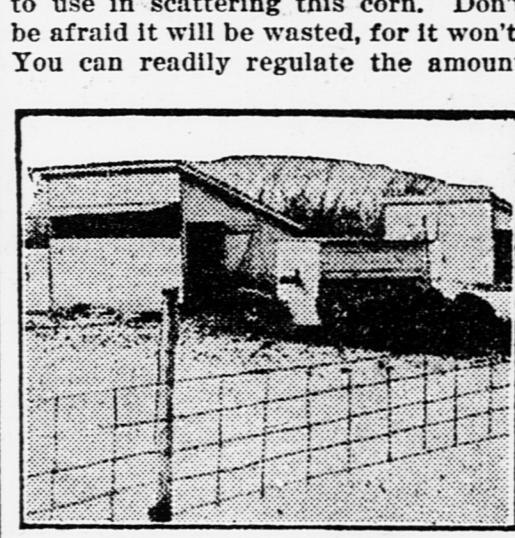

GIVE BROOD SOWS GOOD CARE

Proper Exercise and Protein Feeds in Winter Will Aid in Production of Strong Litters.

(Prepared by the United States Department of Agriculture.)

If the sows that are to farrow in March and April produce good strong, vigorous litters and get their pigs through successfully to weaning time they must be properly cared for from now until the day of farrowing. One of the biggest hindrances to the sows' farrowing good strong, vigorous litters is lack of exercise. During the cold and snowy weather hogs like to lie around the sleeping quarters and be comfortable. That, however, is just what they should not do all the time, advise the specialists of the United States department of agriculture.

The proper exercise for a brood sow is that which she will take voluntarily and not through force. They should get their corn ration by hustling it in the stalk fields and not by getting it fed around the sleeping quarters on feeding floors or in troughs. Feed them ear corn during the winter months and scatter it out in the stalk fields. The manure spreader is a good implement to use in scattering this corn. Don't be afraid it will be wasted, for it won't. You can readily regulate the amount

Pigs at Self-Feeders.

fed so that it will be picked up clean, and you will find next spring that there is not a bit of the corn lying around to go to waste.

Protein feeds in the form of shorts, tankage, offmeat or alfalfa hay should be supplied. Self-feeders can be used for these feeds, and it is quite successful to grind the alfalfa hay. Sows will eat a larger percentage of alfalfa hay fed in the ground form than when fed in racks unground. This alfalfa is generally cheaper on the corn belt farms than any of the other protein feeds and is a good balance to the corn ration.

By following a few of these simple methods the sows will be brought to farrowing time capable of producing good strong pigs. Every hog grower knows that if he is going to have pigs that do their best from the start they must necessarily be strong and vigorous at farrowing time. The proper care of the brood sow is not difficult and should be carefully looked after by every hog grower.

CROPS TO GROW IN ORCHARD

Ideal Method Is Not to Grow Any Cultivated Crop Between Trees—Some Can Be Grown.

The ideal method of handling the young orchard is not to grow any cultivated crops between the trees at all. This will allow them to be cultivated both ways all during summer, which is very desirable. Carefully done, however, some of the hoe crops, like potatoes, strawberries, cabbage, etc., can be grown without injuring the trees to any great extent. These crops more than pay for the expense of cultivating the trees. Not more than three rows should be placed between two peach rows. When the trees begin to bear fruit, these crops should be left off entirely, except possibly two or three rows of peas between the peach rows.

In no case should the trees be stunted or neglected in any way by growing crops in the orchard. Such crops as corn and grain should be left off entirely as they draw heavily on the soil and rob the trees of both food and moisture.

CULTIVATE ALL FRUIT TREES

While Young They Should Be Given as Much Attention as Any Other Crop on the Farm.

Fruit trees respond as readily and readily to cultivation as do garden vegetables and grain crops, and, while young, they should be cultivated with as much care as any other crop. Experiments by agricultural scientists have shown that fruits breathe, and that cold storage delays their ripening by causing them to breathe more slowly than when warm. If an orchard is given as much care as grain and other crops—if it is carefully pruned and sprayed and the ground properly cultivated, especially the first year, there will be no disappointment as to yield, both in quantity and quality.

BRAN AND CLOVER FOR SHEEP

Nothing Better for Ewes With Lambs During Winter Season—Supply Best of Hay.

Feed straw, fodder and stubble grasses during the winter, but toward spring ewes with lamb should have the best of first-crop clover hay, say, feed pedigree. Nothing is better for them than bran and clover hay.

BEST FEED FOR YOUNG PIGS

Skim Milk and Middlings Are Excellent Just After Weaning—Feed Four Times a Day.

Skim milk and middlings make about the best feed for young pigs after weaning. When first weaned they should be fed four times a day, giving only a small quantity each time. When well started, three feeds a day are enough.

OUTDOOR EXERCISE FOR PIGS

Animals Should Be Protected From Cold Winds or Hot Sun—Limit Range for Sows.

Outdoor exercise is beneficial, but pigs should be protected from cold winds or from very hot sun. If the sow is turned out with her pigs, do not give her a very large range or bright.

Changing Milk for Calf. The time to change the calf from whole milk to skim milk depends upon the development of the calf. If it is healthy it may be changed to skim milk at the end of the second week, but the third week would be better.

Horticultural Points

MUSKRAT FOR FOOD

The enormous numbers of carcasses of muskrats which are thrown away after the pelts have been removed is a waste of food. The muskrat is an animal of most cleanly habits, is most discriminating in choice of food, and is a very acceptable addition to the table.

The writer can speak from personal experience to the effect that when cooked as rabbits are cooked the meat of the muskrat is extremely palatable. As a matter of fact, muskrats are sold for food in some of the eastern markets and some hunting clubs in the East have annual banquets in which the muskrat forms the chief dish. In some places this animal is known as the "marsh rabbit."

It is to be hoped that this means of reducing the cost of living, although slight, may not be overlooked.—F. L. Washburn, Minnesota Experiment Station.

RAISING MORE BEEF CATTLE

Thousands of New Breeding Herds Being Established All Over Country With Better Stock.

It is a fact that there are thousands of new breeding herds being established all over the country. It is also a fact that farmers and small ranchmen are using more care in selecting the heifers and cows for these new

Fine Beef Specimen.

herds and the additions they are making to the herds they already have on their farms. Better quality has been preached from every hilltop in the land.

The live stock journals and agricultural papers have not let up in their advocacy of pure-bred cattle for the beef herds, and the voice has been heeded.

GRUBS INJURIOUS TO STOCK

Grubs Found on Backs of Cattle Develop Into Heel Flies and Do Great Harm to Animals.

The characteristic lumps or swellings which may be found under the skin on the backs of many cattle from January to April contain grubs. If these grubs are allowed to remain, they will complete their growth, drop to the ground and transform to heel flies, which may reinfect the cattle during the spring and summer. The grubs weaken the cattle, cause them to fall off in flesh and milk, and decrease the value of the hide. The beef in the immediate vicinity of a grub becomes slimy and of a greenish color, and is known to the butcher as "licked beef." On an average the damage to the hides is placed at one-third their value and the loss of beef to each infested animal ranges from \$3.00 to \$5.00.

GRUBS INJURIOUS TO STOCK

Three Things Should Be Done in Mind—Protein, a Little Fat and to Supply Succulence.

The ration for the dry cow should be formulated with three things in mind, namely, to furnish a sufficient amount of protein to develop the fetus properly and allow a surplus for the needs of the body of the cow to supply enough carbohydrates that the cow may lay on a little fat; and to supply succulence. Some kind of green feed is very essential in the ration for the cow at all times. It serves the purpose of maintaining the bowels in a loose condition, which is necessary to good digestion and assimilation of food.

ARRANGING RATION FOR COWS

Three Things Should Be Done in Mind—Protein, a Little Fat and to Supply Succulence.

Some kind of green feed is very essential in the ration for the cow at all times. It serves the purpose of maintaining the bowels in a loose condition, which is necessary to good digestion and assimilation of food.

COMPOST HEAP IS ESSENTIAL

Leaves, Ashes and Other Refuse Matter Should Be Accumulated for Garden Soil.

With the existing high cost of fertilizers of all kinds it is important that every farmer have a compost heap where leaves, ashes and other refuse matter about the place can be accumulated for use on the garden soil.

THURSDAY, MAY 23, 1918.

Entered at the Greenville, Ky., post office as second-class matter.

This paper has enlisted with the government in the cause of America for the period of the war.

ANNOUNCEMENTS.

For Congress.

We are gratified to announce that MAJ. HENRY L. HENRICKETT of Warren county, a candidate for Congress from the Third Congressional district, sailed for England in the Democratic primary to be held in August, 1918.

There is a war on. Everybody is morally drafted for some sort of service.

Moreover, peace without victory would mean another war soon. And one war of this kind is plenty.

As time goes on more and more Americans realize that this is a good war and well worth getting into.

There are 400,000 feeble minded persons in the United States, not counting the professional pacifists.

American soldiers are helping to guard the channel ports. It is an honorable post of danger and privilage.

Two million Yanks in France this year! This nation does not propose to grasp the German nettle with dirty fingers.

Now it is discovered that "three American correspondents" were not "expelled from Mexico." Look out for tainted news!

This season the admirable young man with the sport shirt and the passionate socks will be missed from his accustomed haunts. He is in a training camp.

Some people are so constituted that they cannot trust any person who belongs to another political party. Therefore we submit that Charles Evans Hughes ought to be made a fixture in the president's office if not in the White House. Then the democrats could trust Wilson and the republicans Hughes. The socialists, of course trust nobody. It is mutual.

Pointed Paragraphs.

Some music has charms that would drive a savage to drink.

Injustice often puts a man on the back while justice kicks him.

A woman often says: "It's no use talking"—but she never means it.

Some would be more likely to take hints if they could pawn them.

Any chronic borrower soon begins to wonder why everyone he knows is poor.

Our school matinée says that the art of love making is usually taught at night school.

When the right young man calls with an engagement ring the girl in the case extends to him the glad hand.

Love is a sweet dream, but the first time a young man sees his best girl with her front hair done up in curl papers he is apt to wake up.

Victrola owners are the most exacting and the most time the most pleased a day of people to the country, the same as they are the world over. Join them, and you will know why. See and hear these instruments at Roark's before buying any machine.

Roark will accept Liberty Bonds at full face value on any selection of a Victrola.

Beloved Woman Enters Rest.

Sarah Drake, wife of Mr. H. H. Haviland, died at her home on Campbell street at 2:30 o'clock last Thursday afternoon, following an illness of some months from a complication of troubles, and for the past several weeks there had been no hope of her recovery. Our city has lost one of its most loved women as her devotion to her church, her husband and her many friends was most worthy and constant. Funeral services were held at the Methodist church at 2:30 Friday afternoon, conducted by the pastor, Rev. W. C. Frank, who was assisted by Rev. G. P. Dillon, of Madisonville, formerly located here. A large gathering of relatives and friends was impressed with the service, and interment was made in Evergreen cemetery.

You can get any other machine you want, at any time, but you will keep the Victrola forever, when you get it. Better wait for the one you want, and which so many people all over the world want, that deliveries are behind the demand. Roark expects liberal shipments soon, or orders placed many months ago.

Man Power.

They're talking now of drafting men whose years have numbered 50; and hope springs in my breast again, the prospects now seem natty. They've barred me out because I'm fat and deaf and broken winded; and rules responsible for that I hope will be rescinded. When first we broke into the game, Apollos were demanded, "We do not want the old or lame"—the officers were candid. "No man is fit to chase the Hun unless he's like Narcissus." And so I dropped my sword and gun, and went home to the missus. "They're mighty choice," said Jane, "my lad, to turn down bevy writers; but wait a while, and they'll be glad to get such deadly fighters." And now it seems that Jane was right; the sergeant's growing thrifty, and he admits a gent may fight who gives his age as 50. And pretty soon the fat and bald, the spavined and the swelled, will front the ranks of peace be called, by Uncle Sam subpoenaed. For paths of peace I care not, I burn with martial ardor; I long to slay the kraut fed Teut and confisicate his larder. Let down the bars! Let every skater who wants to fight go fighting, though he may score three hundredweight, as I do at this writing! WALT MASON.

Sharp Practices Cannot Endure.

For eight years we have been distributing Victrolas in Muhlenberg, and our faith in them is much stronger now than when we secured the agency, for the decision reached then, after an exhaustive study of all machines on the market, led us to the Victrola, and its performance has given most complete satisfaction to every purchaser, so much so that from first to last machines sold by us are in the hands of the original purchasers. The field is enlarging rapidly, and in time practically every home will have some sort of machine. It is to our interest, and to the mutual interest of every buyer, that most thorough investigation can be made in the selection of this item. We have at all times a representative stock of instruments and records, and gladly give public demonstrations. Records of all machines will be played, and the most thorough investigation and comparison of both machines and records should be made by you, and are invited by us. No sharp practices have ever been used by us in making sales, and we will not resort to trickery, "double-dealing" of records in the making of "demonstrations," and other hoodwinking acts and statements followed by some dealers. Everybody gets a square deal from us, before and after a sale, and we refer to our large family of Victrola users, our best incentive and greatest asset in the continual enlargement of this branch of our establishment. Very truly yours,

THE J. L. ROARK ESTATE,
Owen L. Roark, Manager.

NEW AGENTS ARE PLACED AT WORK

Now at Labor in Thirty-Three Northern and Western States.

LARGE INCREASE IS NOTED

Part of National Plan to Augment Production and Conservation of Food Supplies to Meet War Emergency Needs.

(Prepared by the United States Department of Agriculture.)

More than 700 county agents and emergency demonstration agents are now at work in the 33 Northern and Western states. The increase in agents since emergency appropriations became available was more in two months than the average yearly increase during any of the past four years.

County agricultural agent work is conducted by the United States department of agriculture in co-operation with the various state agricultural colleges and local organizations representing the farmers of the county in which the agent is located. The county agent is usually selected by a committee representing the county organization, on recommendation of the county agent leader at the agricultural college. There is at present an unusually great demand for men qualified for work of this kind to carry out the plan, adopted under the food production act, of employing an emergency demonstration agent for every agricultural county in the United States not having a regular county agent. This is a part of the national plan to increase the production and conservation of food to meet the war emergency needs.

Agent in Each County.

Organization of new counties is rapid, especially in states of the central West, several of which have given assurance that there will be a county agent on county emergency demonstration agent in each of their counties by February 1.

Maine, New Hampshire, Massachusetts, Connecticut, Rhode Island and Delaware already have an agent in each county, while New York, Indiana and Pennsylvania are almost completely covered. Nearly half of the agricultural counties in the Northern and Western states are now being served by a local demonstration agent, and the indications are that the country can be completely covered before the beginning of another crop year.

One of the most gratifying features of the organization campaign in the Northern and Western states thus far has been that most counties taking up the work are arranging for it on a permanent basis—many of them making plans for periods of three years.

Must Have Thorough Training.

The qualification requirement of agents are somewhat different in the various states. Graduation from an agricultural college is not in all cases required, though training substantially equivalent to a four years' course at such college is usually insisted upon. A considerable amount of farm experience is a universal requirement, and it is preferable that some of this experience should be secured since completing the college course.

Additional information in regard to county agent work and the organization of farm markets can be had by writing to your state agricultural college or to the United States department of agriculture, Washington, D. C.

CHARACTERISTICS OF A RAM

Male Should Be Selected With Reference to Ewes in Flock—Proper Proportions.

A ram should be chosen having all the characteristics of the breed he represents, and showing character. He

should also be chosen with reference to the ewes of the flock. If the ewes are large and coarse, the ram should be small and compact. If the ewes are small and compact, the ram should be of a larger type.

FATTENING FEED FOR FOWLS

Cornmeal, Middlings, Beef Scrap and Ground Oats Are Said to Be Advantageous.

A good fattening ration for poultry is two parts cornmeal, one part each of middlings, beef-scrap and ground oats, with the hulls sifted out. These meals should be thoroughly mixed, wet with milk and fed to the penned birds three times a day. Usually, it is not profitable to keep birds in the fattening pen longer than three weeks.

For months Roark has advised buyers to secure Victrolas and records before the raise in prices. And the raise came May 10, but is much less than was anticipated, the average on machines and records being only about 5 per cent. So Victrolas are still the cheapest thing you can buy, and always have and will be the best.

Children's Diseases.

Most persons outside of the medical profession think of measles, scarlet fever and a few other similar diseases as afflictions of childhood, and are astonished when epidemics of them occur in the army camps.

The truth is that these diseases are extremely contagious and that the human organism is especially susceptible to them. In thickly settled communities nearly everyone catches them during his childhood.

The same thing used to be true of smallpox, and in the tropical regions of yellow fever, until health officials from the United States, and others instructed by them, drove it away never, let us hope, to return. Now smallpox attacks adults chiefly because most children are protected by vaccination.

The effect of vaccination wears off in some cases, and therefore the person may contract the disease in later life. A person who has not had measles or scarlatina in childhood is very liable to take it in adolescence or in adult life, if he is exposed. That is why measles has made such ravages among our troops in the cantonments. The adult unprotected by a previous attack is, however, not quite so liable to catch the disease as a child is, for he has probably escaped because he posses a natural immunity, if he is fortunate enough to have such a protection against contagion, he may be exposed over and over again without being attacked. Had it not been for instances of natural immunity, the great epidemics of black death in the Middle Ages would have exterminated the people of invaded cities, except for the very few who recovered from attacks.

The principle so called children's diseases—the doctors call them the exanthemata, which means eruptive diseases—are scarlet fever, measles, German measles and chicken pox; whooping cough and mumps are also diseases of childhood, though they do not belong in the group of the exanthemata. Smallpox belongs to the group, but vaccination has removed it from the usual list of childhood diseases. The child who has passed through all of those without mishap is to be congratulated, for he has been freed of a menace that would otherwise hang over his latter years. If that might, when circumstances were favorable, make him an involuntary agent in the spread of a fatal epidemic.

Muscle Tonic.

The qualification requirement of agents are somewhat different in the various states. Graduation from an agricultural college is not in all cases required, though training substantially equivalent to a four years' course at such college is usually insisted upon. A considerable amount of farm experience is a universal requirement, and it is preferable that some of this experience should be secured since completing the college course.

Additional information in regard to county agent work and the organization of farm markets can be had by writing to your state agricultural college or to the United States department of agriculture, Washington, D. C.

DAIRY FACTS

ENORMOUS WASTE IN WINTER

Minnesota Dairy Expert Makes Startling Statement as to Amount of Milk That is Wasted.

Three and one-half billion pounds of milk are practically wasted in the dairy states every winter. This makes 21,000,000 pounds every day. The foregoing is a startling statement, but R. M. Washburn of the division of Agriculture, says it is true. The farmer feeds most of his skim milk to hogs. This milk, fed to hogs, produces only 20 per cent of its energy value in edible pork. Eighty per cent of its energy value is lost. Mr. Washburn says, though, that some milk is necessary to start pigs off strongly.

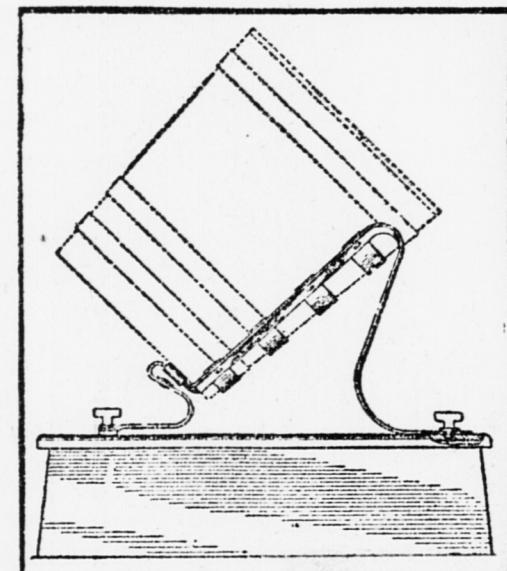

Much more of the energy value of the skim milk will be saved if it is made into cottage cheese. Every 100 pounds of skim milk, says Mr. Washburn, is equivalent to 20 pounds of ordinary meat, and will make 15 pounds of cottage cheese. The cheese contains about one-third more protein and one-third less energy than meat, and is therefore essentially equivalent to meat.

DEVICE ON BUTTER SCALES

Resilient Support Absorbs Most of Shock When Tub is Thrown Hasty on Platform.

The Scientific American in illustrating and describing an attachment for scales, invented by F. D. Shen, 164 Chambers street New York, says:

This device is adapted particularly for the weighing of butter. It consists of a resilient support secured to the platform of the scales, which will absorb most of the shock when a tub of butter is thrown hasty thereon.

Attachment for Scales.

thus relieving the scales of jar and making it possible to ascertain the weight of a tub of butter more quickly.

OPEN SHED IS SATISFACTORY

Experiments Conducted by Department of Agriculture on Government Farm at Beltsville.

(Prepared by the United States Department of Agriculture.)

In experiments at Beltsville, Md., by the Bureau of Animal Industry, United States Department of Agriculture, a warm barn, commonly deemed essential for large milk production during the winter months, proved to be somewhat less satisfactory than an open shed. Experiments extending over three years showed that cows housed in the open shed consumed a little more feed, required more bedding and slightly increased labor cost, but because more milk was produced and on account of the lower cost of housing, the open shed was found to be somewhat more economical.

BEST GRASSES FOR PASTURE

When Sowing Make Up Mixture So That Some of Plants Will Be Growing at All Times.

It is possible for pasture to be so scant that the cow uses up all her energy in securing enough nutrients from it to maintain her body. When sowing for pasture make up a mixture of grasses such that some one of the grasses will be green and palatable at all times of the growing season.

REAL SUCCESS IN DAIRYING

End Can Be Brought About By Partnership Between Good Cow and Intelligent Feeder.

Real success in dairying comes from a partnership between the good cow and the good feeder. Many a good cow fails because never given a chance to prove her ability. If one would be a successful dairymen he must study the business, learn how to know cows and how to feed them.

Building Up Dairy Herd. A good dairy herd is built up only after years of constructive breeding and selection. To sell these herds for beef would be to undo much of the effective work which has been done.

Keep All Milk Cows. Don't dry up the milk cows. They are going to be scarce and high priced next year.

PATRIOTISM ON THE AMERICAN FARM BACK TO THE LAND

THE KITCHEN CABINET

The grasses whisper to the wind, The maples to the rain; Light-footed spring goes whispering In meadow and in lane.

SOME GOOD DISHES.

A dessert which is not at all common, but which is most tasty is the following: Cut up one orange or a tangerine, add two chopped apples, sprinkle lightly with sugar. When serving mix and arrange a slice of lemon jelly thickened with grapefruit on the top of each. Serve with sugar and cream.

Lemon jelly, grapefruit and a few sliced walnuts is another combination which may be molded and sliced; then serve with whipped cream or cut in cubes and serve in sherbet cups with a little ice cream for garnish.

Tomatoes Scalloped With Green Peas.—Take half as many crumbs as tomatoes. For a cupful of crumbs mix a fourth of a cupful of any sweet fat melted. Fry a slice of onion and half of a shredded green pepper in a little of the fat and arrange in layers in a baking dish, leaving the crumbs on top. Bake twenty minutes and serve hot.

Stuffed Tomatoes.—Take small-sized tomatoes, fill with the following mixture: Boiled rice, chopped nuts and a seasoning of salt and pepper with a little fried onion. Fill the tomatoes and bake slowly one hour. Serve with a sauce from the pan which has been slightly thickened with flour. The centers of the tomatoes may be used in a salad or in various ways which will occur to the cook.

Cabbage With Meat.—To eke out a small amount of meat and make a satisfying meal shred half a cabbage, crisp it by letting it stand an hour in cold water, then drop into rapidly boiling water and cook for twenty minutes; drain and press out the liquor. Put into a baking pan, a layer of the cabbage then a layer of any chopped meat, place a few pieces of tomato, the firmer pieces taken from the can, over the meat, season well with salt and pepper and repeat, leaving a layer of tomatoes on top. Cover with buttered bread crumbs and bake in a moderate oven for one hour. Any cold leftover cabbage may be used in this way.

Dried peas, which have been quickly dried when they were tender and sweet, make a most delicious addition to the menu. Soak, then cook until soft and use as a vegetable or soup, in combination with other foods.

—Save Food.—

The Food Administration announces to the people of Kentucky that there will be sugar for canning this year. Those who need sugar for canning have only to apply to their County Administrators at the canning time, who will give them certificates entitling them to purchase in necessary quantities.

—Save Food.—

During the next four months America will be shorter of wheat than anything else. Lessening of wheat consumption is a military necessity. We have less than a bushel apiece which must be made to last until about July 1st. Saving wheat is war work, and the man or woman who wastes wheat is in the class with the Russian Bolsheviks who destroyed ammunition and enabled the Huns to make their invasion of Russia a holiday affair.

—Save Food.—

The campaign for additional signatures to the Household Pledge Card is progressing throughout Kentucky. About 200,000 women have signed, but 300,000 have not, and the campaign will continue until every one of the 300,000 have either signed or positively refused to do so. In some of the counties the newspapers are printing the names of those who sign. In those counties everybody knows that those whose names are not printed are not trying to win the war, and are not good Americans.

—Save Food.—

Food Administration workers in every county are taking the names of those who sign and those who do not sign. Copies of these names will be kept in each county, in Louisville and in Washington. Soon this record will be complete, and the children of the future generations of Kentuckians will be able to tell 100 years from now whether their grandparents were good Americans or selfish slackers.

—Save Food.—

In an interview today, Fred. M. Sackett, the Federal Food Administrator for Kentucky, said that the active co-operation he was receiving from the people of the state in all the efforts which the Administration at Washington was making to insure adequate supply of foodstuffs and equitable distribution at fair prices, was intensely gratifying. In war times prices of all foodstuffs are high, yet high prices induce large production, and it is quantity of food that this country needs today. Whatever sacrifice of personal gain is being made is by our people who produce our needed food, is the tribute of the man and woman at home to our boys who have gone from every community to fight for our freedom and our liberties.

—Save Food.—

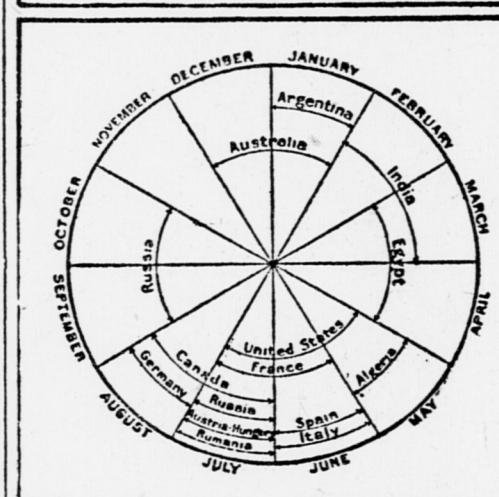

Be sure there is enough for two years' planting. You may need it yourself if the first planting is drowned out; and there never was a time when there was not a demand for seed corn known to be good.

—Save Food.—

Keep the seed corn well stored, and then test it in the corn planter and then plant it.

—Save Food.—

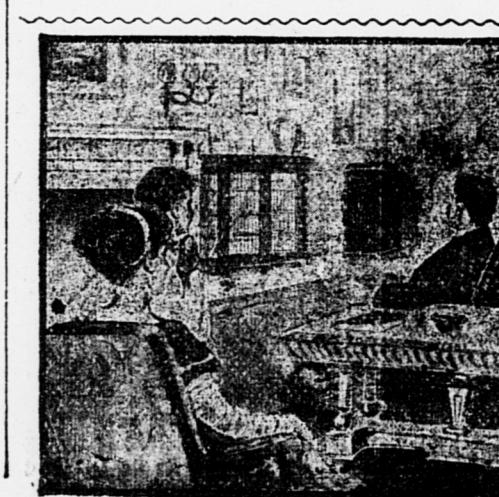

WHEAT HARVESTS OF THE WORLD

WINTER CARE FOR CHICKENS

Where Hens Are Compelled to Use Energy in Fighting Cold They Will Not Produce Eggs.

Keep the hens warm and comfortable, yet provide enough ventilation to keep the air pure, for a hen that must use her energy in fighting the cold cannot put the same energy into egg production.

The Victrola, at home and abroad, outsells any instrument, many times over, and comparisons will only show you why. Roark will gladly demonstrate.

Louisville Hotel and Old Inn Co. Props.

The Victrola is a good friend of the invalid

If the Victrola did nothing more than help to pass the time, it would still be worth while in the sick room.

But it does more than that—it cheers the invalid and helps toward a more rapid recovery.

The portable sizes of the Victrola are to be had at \$15, \$25, \$40, \$50; the cabinet styles from \$75 to \$400. Easy terms can be arranged if desired.

Stop in and we'll gladly demonstrate the Victrola and play any music you wish to hear.

LIVER DIDN'T ACT DIGESTION WAS BAD

Says 65 year Old Kentucky Lady, Who Tells How She Was Relieved After a Few Doses of Black-Draught.

Meadows, Ky.—Mrs. Cynthia Higginbotham, of this town, says: "At my age, which is 65, the liver does not act so well as when young. A few years ago, my stomach was all out of fix. I was constipated, my liver didn't act. My digestion was bad, and it took so little to upset me. My appetite was gone. I was very weak... I decided I would give Black-Draught a thorough trial as I knew it was highly recommended for this trouble. I began taking it. I felt better after a few doses. My appetite improved and I became stronger. My bowels acted naturally and the least trouble was soon righted with a few doses of Black-Draught."

Seventy years of successful use has made Thedford's Black-Draught a standard, household remedy. Every member of every family, at times, need the help that Black-Draught can give in cleansing the system and relieving the trouble that come from constipation, indigestion, lazy liver, etc. You cannot keep well unless your stomach, liver and bowels are in good working order. Keep them that way. Try Black-Draught. It acts promptly, gently and in a natural way. If you feel sluggish, take a dose tonight. You will feel fresh tomorrow. Price 25¢ a package—One cent a dose. All druggists.
